

Ideation Phase – Empathize & Discover

Date: 26/09/2026

Team ID: SWTID-2026-7464

Project Name: Script-Controlled ACL – Restrict Record Access Based on Field Value

Maximum Marks: 4 Marks

Empathy Map Canvas

User persona: Application User / Administrator responsible for secure record access

SAYS • "I should only see records I'm authorized to access." • "The access rule should depend on the record's field value." • "The restriction should be clear and consistent."	THINKS • "Will the ACL evaluate the field value correctly?" • "Could a user access a record that should be restricted?" • "Is the script enforcing the intended security rule?"
DOES • Attempts to open records based on their assigned access. • Works with records whose field values determine access. • Tests or configures ACL behaviour for different record conditions.	FEELS • Concerned about unauthorized record visibility. • Frustrated when access rules are difficult to configure or understand. • More confident when access is predictable and consistent.
PAINS • Risk of unauthorized access to records. • Complex or inconsistent ACL configuration. • Difficulty validating script-based access conditions. • Unclear behaviour when field values change.	GAINS • Record access is restricted according to the required field value. • Security rules are applied consistently. • Administrators can understand and test the access condition. • Users see only the records appropriate to their access.

This canvas is based on the uploaded template's purpose: understanding a user's behaviours, attitudes, goals, and challenges from the user's perspective. ■filecite■turn1file0■L8-L16■
