

Project Design Phase-II

Data Flow Diagram & User Stories

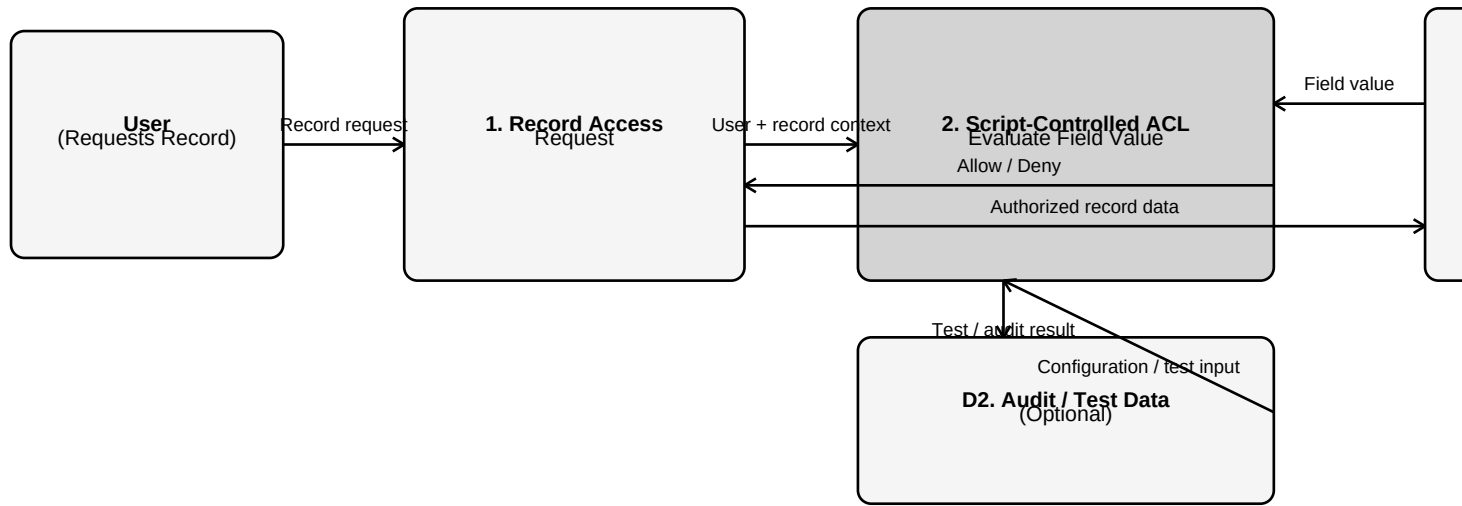

Date: 26/09/2026 Team ID: SWTID-2026-7464

Project Name: Script-Controlled ACL – Restrict Record Access Based on Field Value

Maximum Marks: 4 Marks

This document follows the uploaded template, which defines a DFD as a visual representation of information flows showing how data enters/leaves the system, is changed, and is stored. ■filecite■turn4file0■L8-L13■

Data Flow Diagram – Level 0

DFD interpretation: The user requests a record; the application supplies the relevant user/record context to the script-controlled ACL; the ACL evaluates the configured field value; the system returns an Allow/Deny decision and exposes record data only when access is permitted.

User Stories

The uploaded template organizes user stories by User Type, Functional Requirement (Epic), User Story Number, User Story/Task, Acceptance Criteria, Priority, and Release. [filecite turn4file0 L15-L22](#)

Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Administrator	ACL Configuration	USN-1	As an administrator, I can configure an ACL to restrict record access based on a specified field value.	ACL can be based on a specified field value of a record/table and High	High	required field Sprint-1
Administrator	ACL Configuration	USN-2	As an administrator, I can write or configure the script that evaluates field values.	Field value is evaluated and returns the expected access decision. High	High	required field Sprint-1
	Record Access	USN-3	As a user, I can access a record when the field value satisfies the field-based ACL condition.	Field value is evaluated and returns the expected access decision. High	High	required field Sprint-1
	Record Access	USN-4	As a user, I cannot access a record when the field value does not satisfy the field-based ACL condition.	Field value is evaluated and returns the expected access decision. High	High	required field Sprint-1
Administrator	Validation & Testing	USN-5	As an administrator, I can test the ACL with different field values.	Field value is evaluated and returns the expected access decision. High	High	required field Sprint-1
Administrator	Validation & Testing	USN-6	As an administrator, I can define behaviour for missing or unexpected field values.	Field value is evaluated and returns the expected access decision. Medium	Medium	required field Sprint-1
Administrator	Maintenance	USN-7	As an administrator, I can update the field-based access rules.	Field value is evaluated and returns the expected access decision. Medium	Medium	required field Sprint-1
Administrator	Audit / Documentation	USN-8	As an administrator, I can document the field, condition, and expected access decision.	Field value is evaluated and returns the expected access decision. Low	Low	required field Sprint-1

Note: The uploaded source provides the DFD definition and the required user-story table structure; the project-specific ACL content above is created for the project named in the request. [filecite turn4file0 L8-L22](#)
