

Planning Logic

Date: 15 February 2025 **Team ID:** SWTID-2026-7464 **Project Name:** Script-Controlled ACL – Restrict Record Access Based on Field Value

Planning Concepts

Following the uploaded Planning Logic template, a Sprint is a fixed period in which the team works to complete a set of tasks; an Epic is a larger task broken into smaller stories; a Story is a small task within an Epic; and Story Points represent the effort required to complete a story. The source uses the Fibonacci-style values 1, 2, 3, and 5. ■filecite■turn11file0■L2-L12■

Sprint 1

Sprint 1	Story / Task	Story Point
ACL Configuration (Epic 1)	Configure target record/table and selected field (USN1)	2
	Define expected field value / access condition (USN2)	2
Script-Controlled Evaluation (Epic 2)	Create/configure ACL script to evaluate field value (USN3)	3
	Implement allow/deny decision based on condition (USN4)	3
Record Access (Epic 3)	Allow access when field condition matches (USN5)	2

Total Story Points in Sprint 1 = 2 + 2 + 3 + 3 + 2 = 12

Sprint 2

Sprint 2	Story / Task	Story Point
Record Access (Epic 3)	Restrict access when field condition does not match (USN6)	2
Validation & Testing (Epic 4)	Test matching and non-matching field values (USN7)	3
	Handle missing, empty, invalid, or unexpected values (USN8)	2
Maintenance & Audit (Epic 5)	Update field-based ACL rule when requirements change (USN9)	2

Total Story Points in Sprint 2 = 2 + 3 + 2 + 2 = 9

Sprint 3

Sprint 3	Story / Task	Story Point
Maintenance & Audit (Epic 5)	Document ACL field, condition, expected decision, and test results (USN10)	1
Validation & Testing (Epic 4)	Final end-to-end validation of representative records and user contexts (USN11)	2

Total Story Points in Sprint 3 = 1 + 2 = 3

Total Story Points and Velocity

Measure	Calculation	Result
Total Story Points	Sprint 1 + Sprint 2 + Sprint 3	12 + 9 + 3 = 24
Number of Sprints	Planned sprints	3
Velocity	Total Story Points Completed / Number of Sprints	24 / 3 = 8 Story Points per Sprint

Planning note: The velocity above is a planned/projected velocity derived from the assigned story points in this document. The uploaded example calculates velocity from total story points divided by the number of sprints; actual team velocity should be recalculated from completed story points after execution.
