

Functional & Performance Testing Template

Model Performance Test

Test Scenarios & Results

Note: Actual Result and Pass/Fail should be completed after executing each test case. Date and Team ID are intentionally left blank.

Date	
Team ID	
Project Name	GenAI Project

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Text Input Validation	Enter valid, empty, very short, and invalid text in the GenAI input field.	Valid inputs are accepted; empty or invalid inputs show a clear validation message.	To be filled during execution.	Pending
FT-02	Prompt / Query Validation	Enter different prompt types such as questions, instructions, and unsupported requests.	The system accepts valid prompts and handles unsupported/invalid prompts safely.	To be filled during execution.	Pending
FT-03	Content Generation	Provide complete inputs and click 'Generate'. Test multiple valid prompts.	Relevant, coherent content is generated according to the supplied prompt.	To be filled during execution.	Pending
FT-04	Output Accuracy & Relevance	Compare generated output with the user prompt and required project objective.	Output is relevant, logically structured, and addresses the requested task.	To be filled during execution.	Pending
FT-05	Empty Input Handling	Click 'Generate' without entering a prompt or required input.	System prevents generation and displays an appropriate validation message.	To be filled during execution.	Pending
FT-06	API Connection Check	Check API configuration and send a valid request to the GenAI model.	API responds successfully and the generated response is returned to the application.	To be filled during execution.	Pending
FT-07	Error Handling	Simulate invalid input, unavailable API response, or request failure.	A clear error message is displayed without crashing the application.	To be filled during execution.	Pending
FT-08	Response Consistency	Send the same or equivalent prompt multiple times and review the responses.	Responses remain relevant to the prompt and follow the application's expected output format.	To be filled during execution.	Pending
PT-01	Response Time Test	Use a timer to measure the time from submitting a prompt to receiving generated content.	Content generation response should be under 3 seconds, as specified in the template.	To be filled during execution.	Pending
PT-02	API Speed / Concurrent Request Test	Send multiple GenAI API requests at the same time and monitor response time.	API continues responding without unacceptable slowdown or failure.	To be filled during execution.	Pending
PT-03	Repeated Request Load Test	Send repeated generation requests over a test period and monitor the application.	System processes repeated requests smoothly without crashing or significant degradation.	To be filled during execution.	Pending

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
PT-04	Large Prompt / Input Load Test	Submit prompts containing a large amount of text within the application's supported limit.	System processes supported input sizes successfully and handles oversized input gracefully.	To be filled during execution.	Pending
PT-05	File Upload Load Test	Upload multiple supported files/PDFs and check processing and GenAI response.	Files are processed smoothly without crashing; valid content is used for generation.	To be filled during execution.	Pending
PT-06	Concurrent User Simulation	Simulate multiple users generating GenAI responses simultaneously.	Application remains responsive and requests are handled successfully.	To be filled during execution.	Pending
